ArcGIS Pro: Tips and Tricks

Matthew Berra

Agenda

- Key Concepts / Backstage
- Exploring the Catalog and Contents
- Working with Raster Layers
- Working with Feature Layers
- Interacting with the Map
- Creating Layouts
- Geoprocessing and Analysis
- Creating and Linking Views
- Editing Data
- Working with Imagery
- Sharing Your Work
- Questions

Key Concepts / Backstage

Key Differences between ArcMap and ArcGIS Pro

- ArcMap **.mxd** (Map Document) \neq ArcGIS Pro **.aprx** (Project File)

- **User Interface**

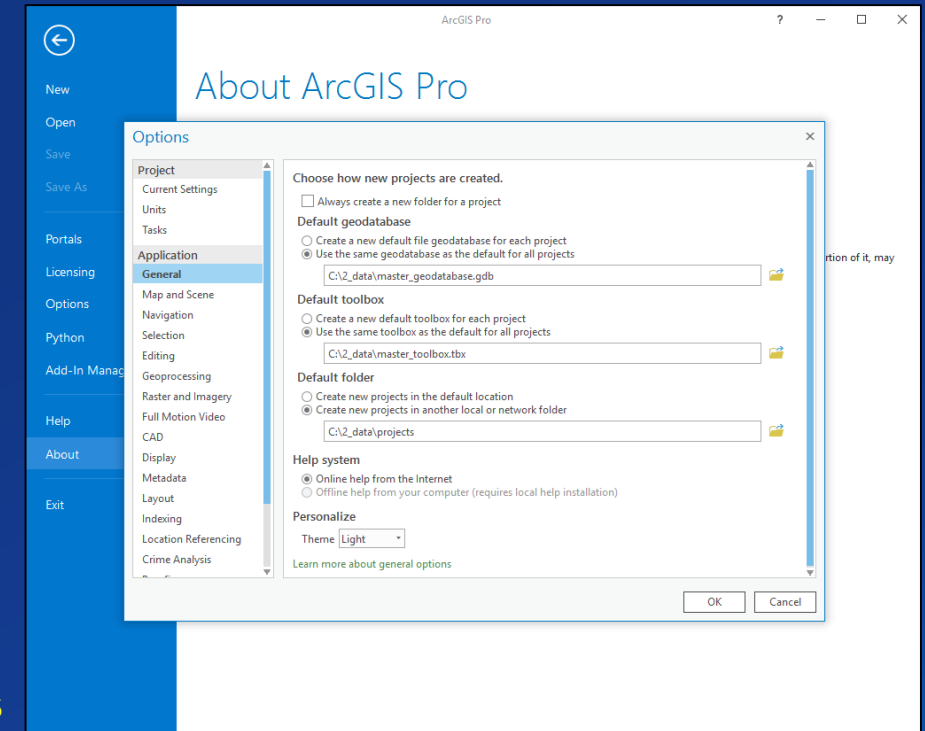

- Tools appear when you need them
- Explore tool combines Pan, Zoom, Identify, and HTML Pop-up
- Editing – Always Enabled

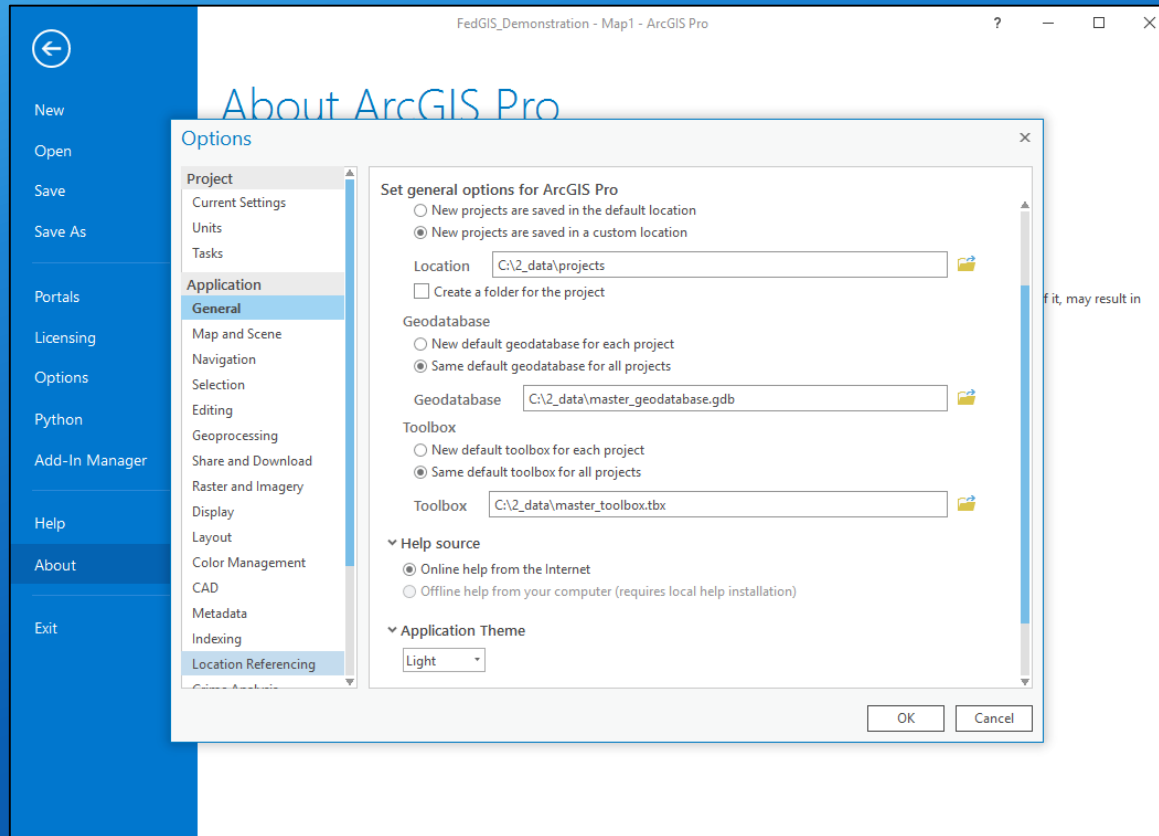

- **Connection to ArcGIS Online and Portals**

- **Previously Separate Tools Combined into One (Maps, Catalog, Toolbox, 2D, 3D)**

Before a project is even opened:

- **Tip # 1:** Right-click ArcGIS Pro in the Start Menu to open a recent project
 - Right-click a project to remove it from the list
- **Tip # 2:** Go directly to Backstage by clicking **Settings**
- **Tip # 3:** Use **Portals** to manage connections to multiple Portals
- **Tip # 4:** Licensing → **Authorize ArcGIS Pro to work offline**
- **Tip # 5:** Options → General → **Create projects (set defaults)**
- **Tip # 6:** Options → General → **Help source**
- **Tip # 7:** Options → General → **Application Theme**
- **Tip # 8:** Options → Map and Scene → **Set Default Basemap**
- **Tip # 9:** Options → Map and Scene → **Add Layer - Visibility**
- **Tip # 10:** Options → Editing → Session → **Automatically save edits**
- **Tip # 11:** Options → Geoprocessing → **Analyze script and model tools for compatibility**
- **Tip # 12:** Options → Geoprocessing → **R-ArcGIS Support**
- **Tip # 13:** Options → Raster and Imagery → **Perspective Imagery**
- **Tip # 14:** Options → Proofing → **Enable spell checking**
- **Tip # 15:** Options → Customize the Ribbon → **Accelerator**

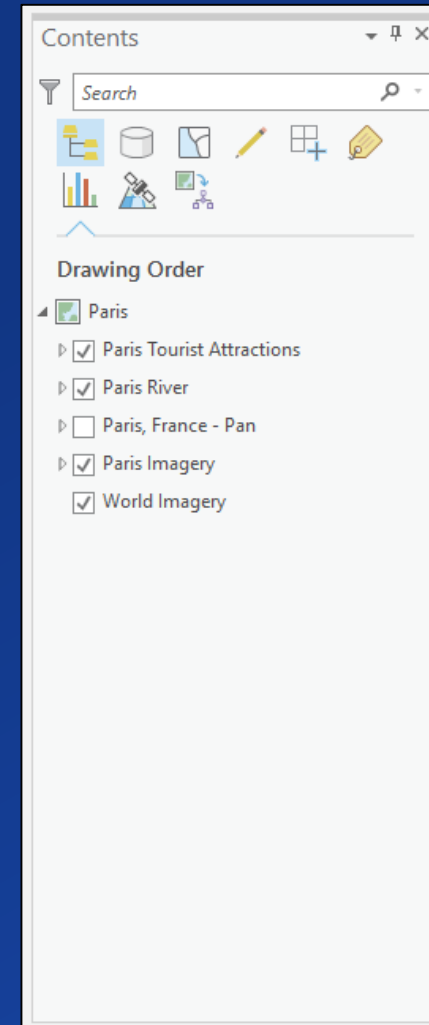

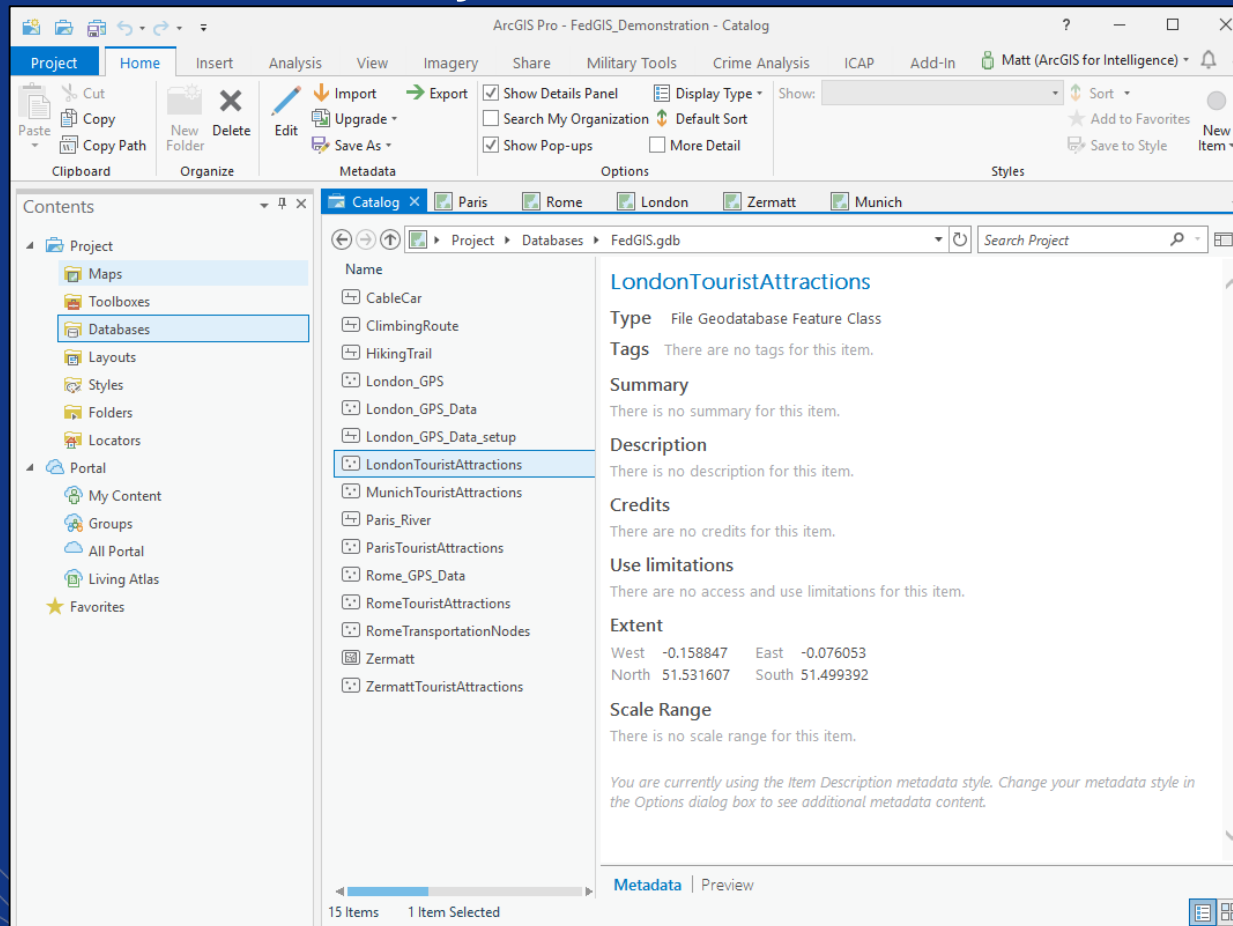

Backstage

Exploring the Catalog and Content

Key Differences between ArcMap and ArcGIS Pro

- In ArcGIS Pro the Catalog opens directly in the main window

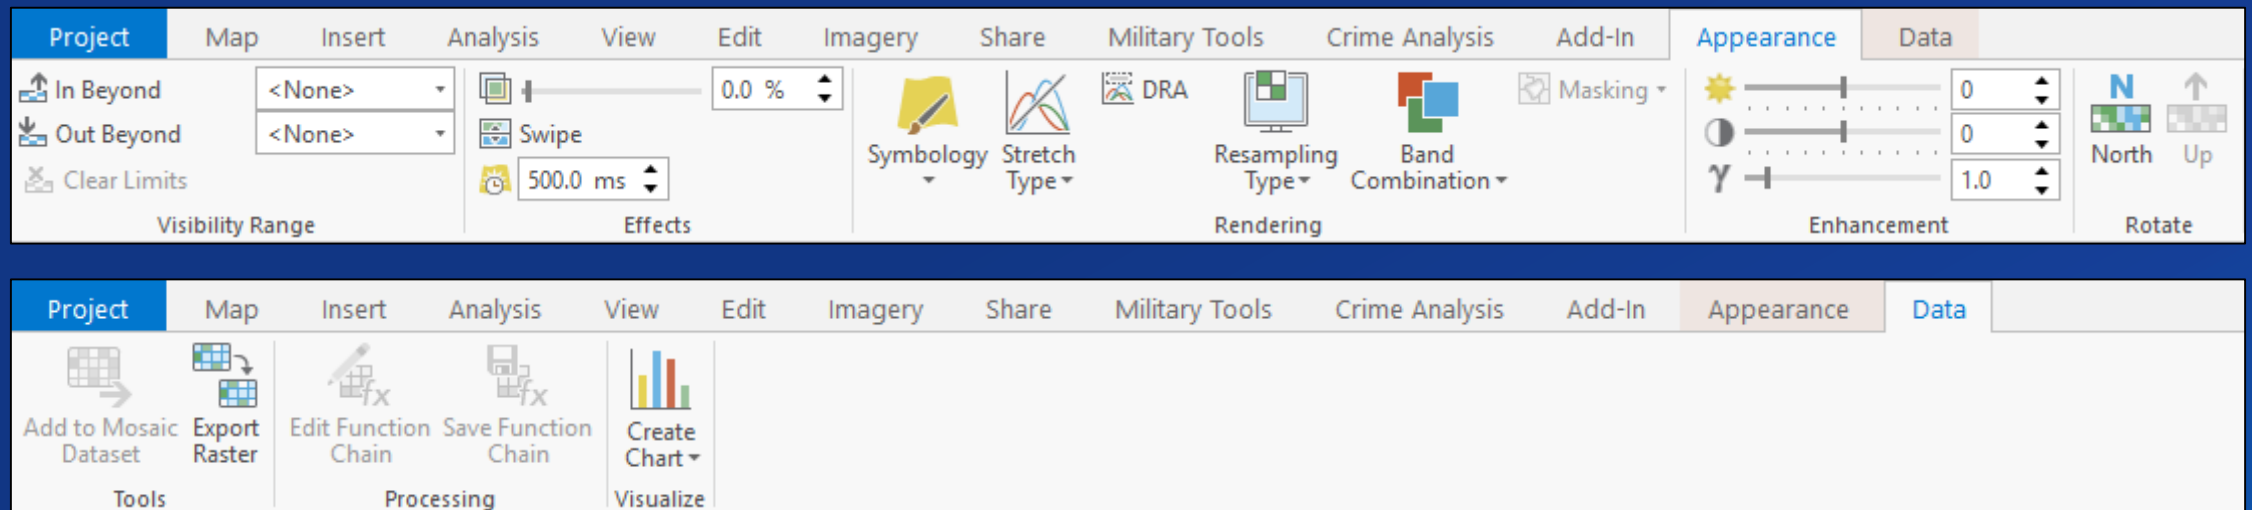

- The Contents window has new tools to sort, filter, and query layers

Working with Raster Data

Key Differences between ArcMap and ArcGIS Pro

- When a raster layer is selected the Appearance and Data tabs are automatically displayed

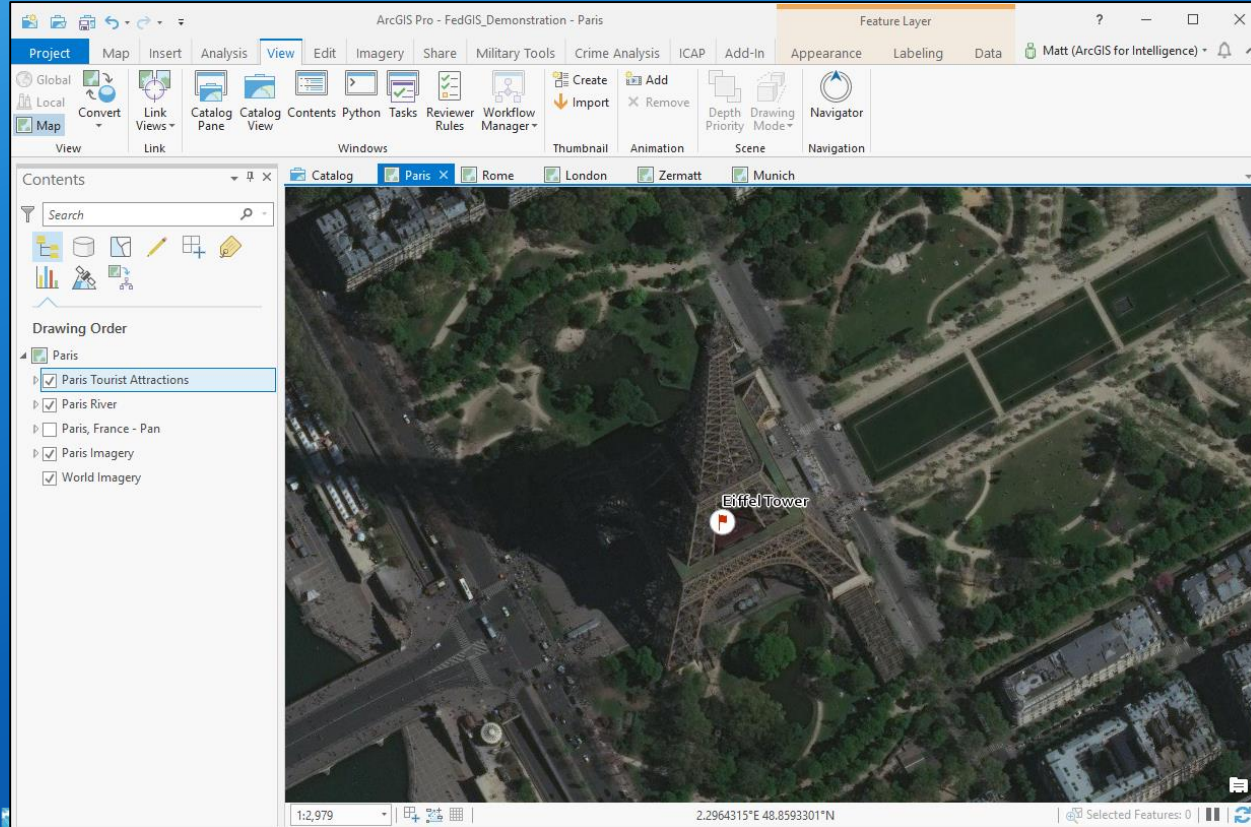

Catalog and Contents:

- Tip # 16: Preview data in the Catalog using a Basemap
- Tip # 17: Right-click folders and geodatabases to **Add to Favorites**
- Tip # 18: Filter the Contents by layer type by using 
- Tip # 19: Use the **Search Box** to filter the Contents by keyword
- Tip # 20: List Content by **Perspective Imagery** to set the Focus Image Layer
- Tip # 21: List Content by **Labeling** to edit the labels of multiple layers at one time
- Tip # 22: Use the **Undo Drop Down** to go back multiple steps
- Tip # 23: **Alt-click** a layer – Zoom to layer
- Tip # 24: **Left/Right** arrows – Expand and contract layer
- Tip # 25: **Spacebar** – Turn on/off selected layers

Raster Layers:

- Tip # 26: Use the **Top Up** and **North Up** buttons to rotate based on Imagery Metadata
- Tip # 27: Use **a** and **d** to rotate the map frame. Use **n** to rotate the frame to North

Catalog, Contents, and Raster Layers

Working with Feature Layers

Key Differences between ArcMap and ArcGIS Pro

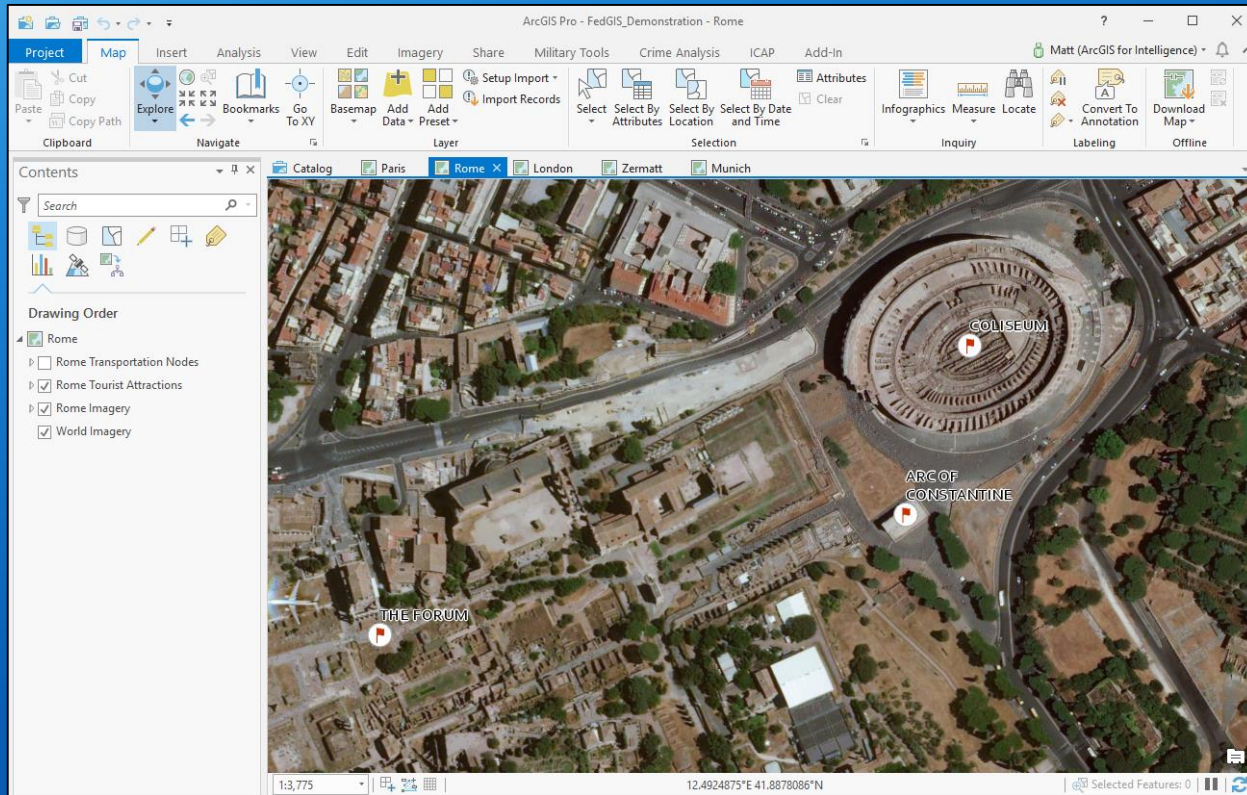

- When a feature layer is selected the Appearance, Labeling, and Data tabs are automatically displayed

Feature Layers:

- Tip # 28: Use **Arcade** expressions to customize labels
- Tip # 29: When working with Text Symbols press the **arrow in the bottom-right** corner for more options
- Tip # 30: Use Appearance → Symbology → **Display Filters** to change symbols based on scale
- Tip # 31: Use **charts** to visualize data and interact with the map
- Tip # 32: The **Selected Features** box below the map is a button that zooms to the selected features

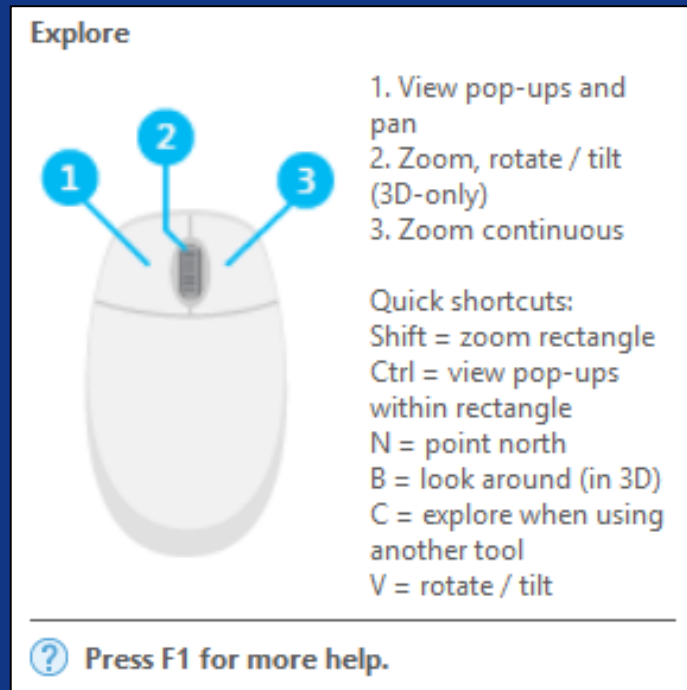

Feature Layers

Interacting with the Map

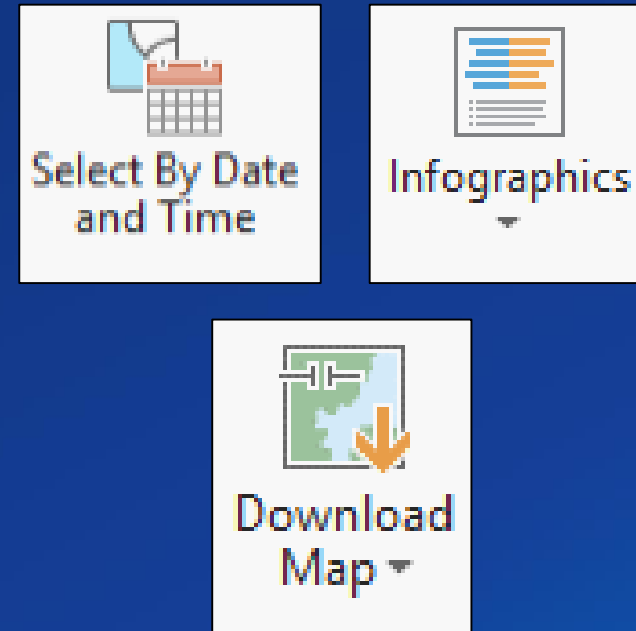

Key Differences between ArcMap and ArcGIS Pro

- Introduction of the Explore Tool

- Introduction of the Map Ribbon

Creating Layouts

Key Differences between ArcMap and ArcGIS Pro

- To Create a Layout: Insert → New Layout

- The Content in the Insert Tab changes

- A Layout Tab is added to the Ribbon

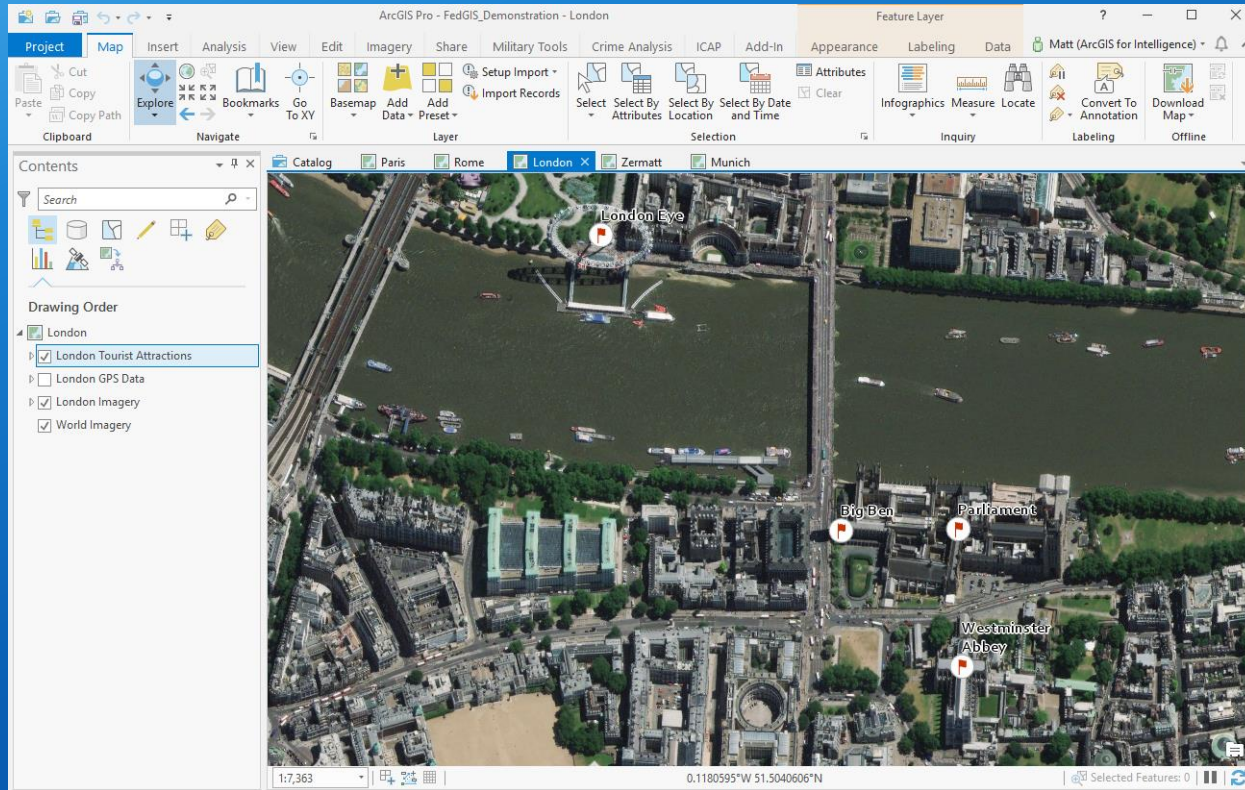

Map Tab:

- Tip # 33: Use the **Explore** Drop-down menu to only interact with specific layers
- Tip # 34: Click anywhere on a point symbol to interact with the feature
- Tip # 35: Use **Select By Date and Time** to narrow down a selection using a Date field
- Tip # 36: Add a layer to the **Locate** tool as a Location Provider to query for locations within local datasets
- Tip # 37: Analyze Esri's curated content using custom **Infographics**
- Tip # 38: Use the **Range Slider** to dynamically query features with a numeric attribute
- Tip # 39: **Ctrl-click** (Center), **Shift-click** (Center and Zoom), **Shift-draw box** (Zoom), **Insert** (Zoom to Full Extent)

Insert Tab:

- Tip # 40: Use **Import Map** to load a .mxd, .sxd, or .mmpk into your project
- Tip # 41: Use **New Report** to generate a Report, and **New Notebook** to create a new Python Notebook
- Tip # 42: Use **Import Styles** to load symbology from an existing ArcMap style file
- Tip # 43: Use **New Layout** additional times to create multiple layouts for the same map
- Tip # 44: Use **Show only Visible** and **Show Count** to dynamically enhance your Legend
- Tip # 45: Use **Lock Elements** to prevent layout items from accidentally being moved

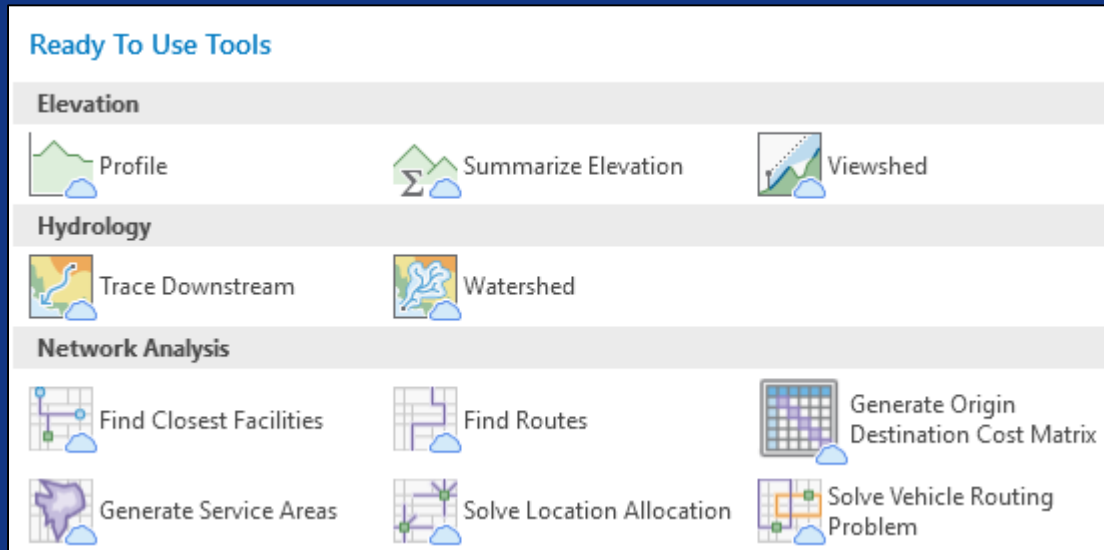

Interacting with Map and Creating Layouts

Geoprocessing and Analysis

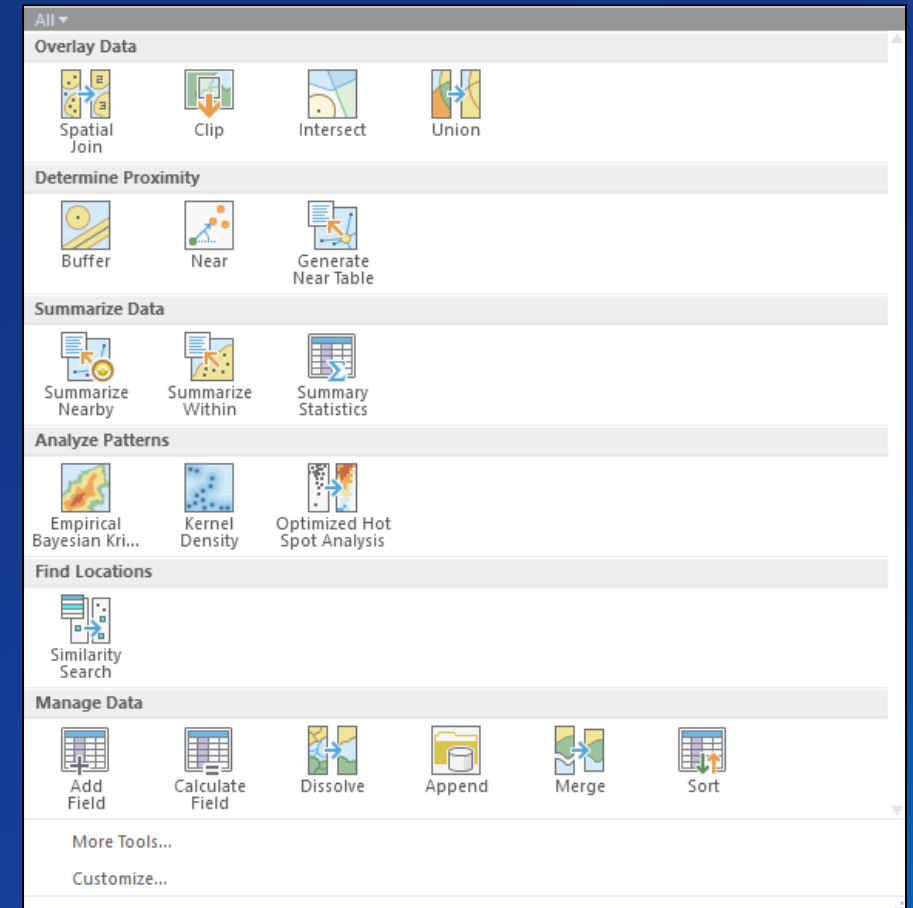

Key Differences between ArcMap and ArcGIS Pro

- Ready To Use Tools

- The Analysis Gallery

Creating and Linking Views

Key Differences between ArcMap and ArcGIS Pro

- Convert between 2D and 3D

- On-screen Camera Navigation

- Link Views for Simultaneous Navigation

Editing Data

Key Differences between ArcMap and ArcGIS Pro

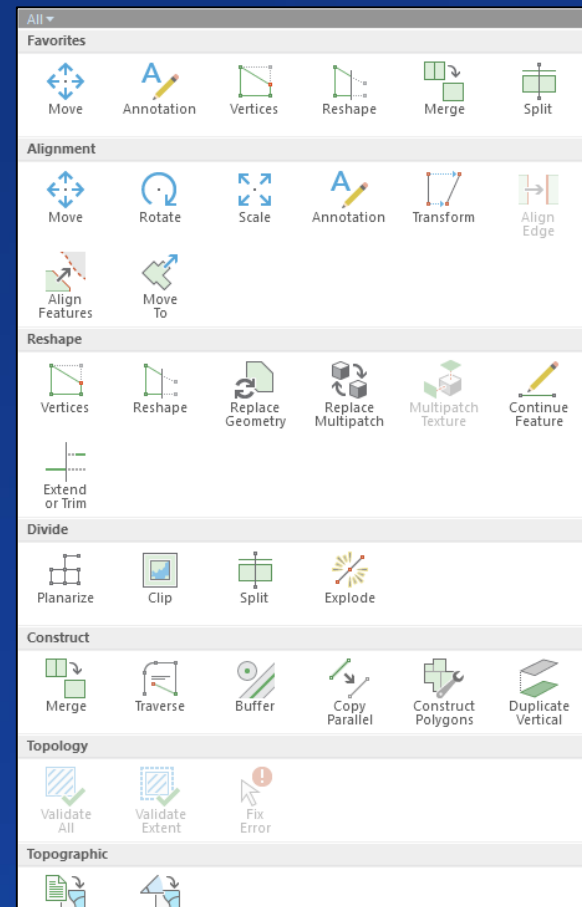

- Automatic Editing

- Editing Grid

- The Editor Tool Gallery combines the tools from the ArcMap Edit, Advanced Editing, and Topology Toolbars

Analysis Tab:

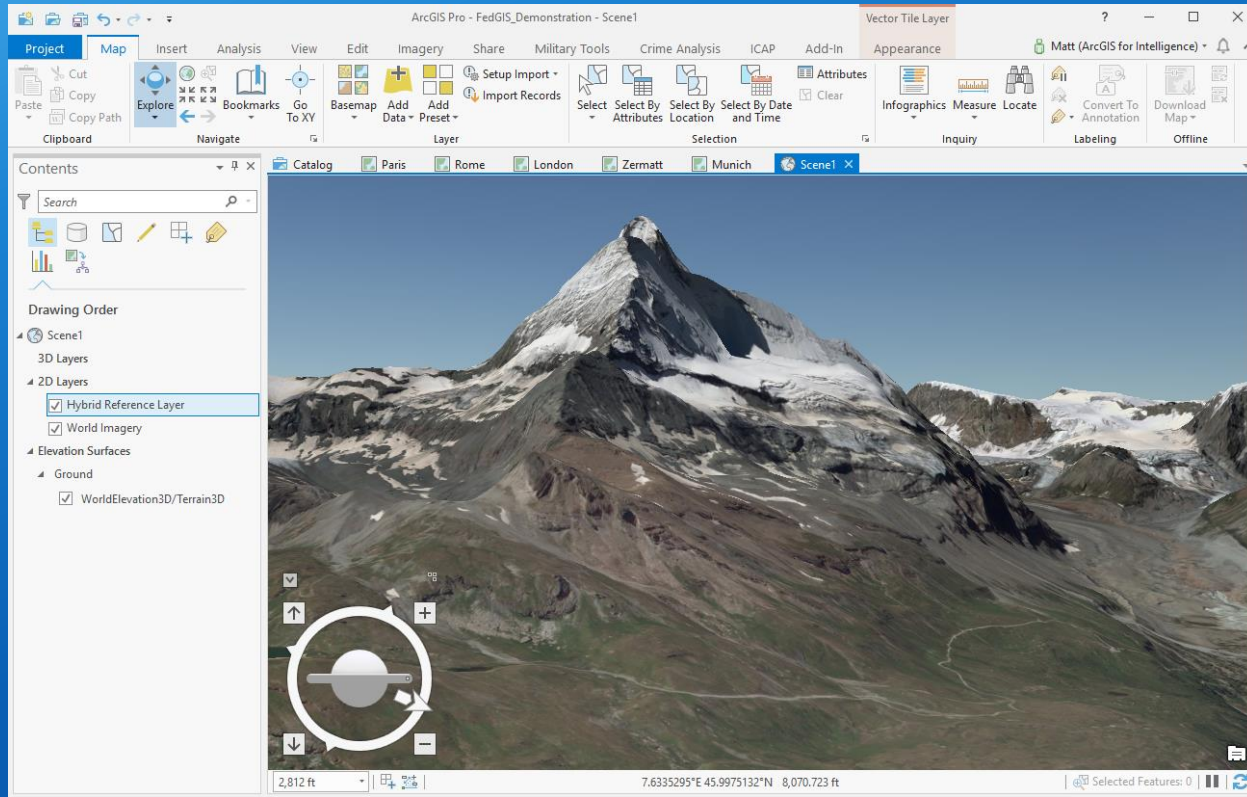

- Tip # 46: Use **Ready to Use Tools** to access Esri hosted data and analysis capabilities
- Tip # 47: When running a geoprocessing tool use an **Interactive Input** to draw new input features
- Tip # 48: Right-click a tool in the toolbox to run it in **Batch** mode
- Tip # 49: Right-click a tool in the toolbox to add it to the **Geoprocessing Gallery** or **Favorites**
- Tip # 50: Right-click a tool in the Ribbon to add it to the **Quick Access Toolbar**
- Tip # 51: Access the **Exploratory Analysis** Tools when viewing a 3D scene

View Tab:

- Tip # 52: Use **Convert** to switch your view between 2D, 3D, and Basemap options
- Tip # 53: Reset your ArcGIS Pro layout with **Reset Panes**
- Tip # 54: To link the navigation of multiple maps or scenes use **Link Views**
- Tip # 55: Turn on the **Navigator Control** to enable on-screen navigation

Edit Tab:

- Tip # 56: Use Attributes → **Geometry** to get a feature's raw coordinates
- Tip # 57: Add an **Editing Grid** to assist in aligning features
- Tip # 58: Click the arrow in the bottom-right corner of the Features toolset to **Manage Templates**

Geoprocessing and Analysis, Creating and Linking Views, and Editing Data

Working with Imagery

Key Differences between ArcMap and ArcGIS Pro

- Introduction of the Imagery Tab

Sharing Your Work

Key Differences between ArcMap and ArcGIS Pro

- Better Integration and more options when working with ArcGIS Online / Portal

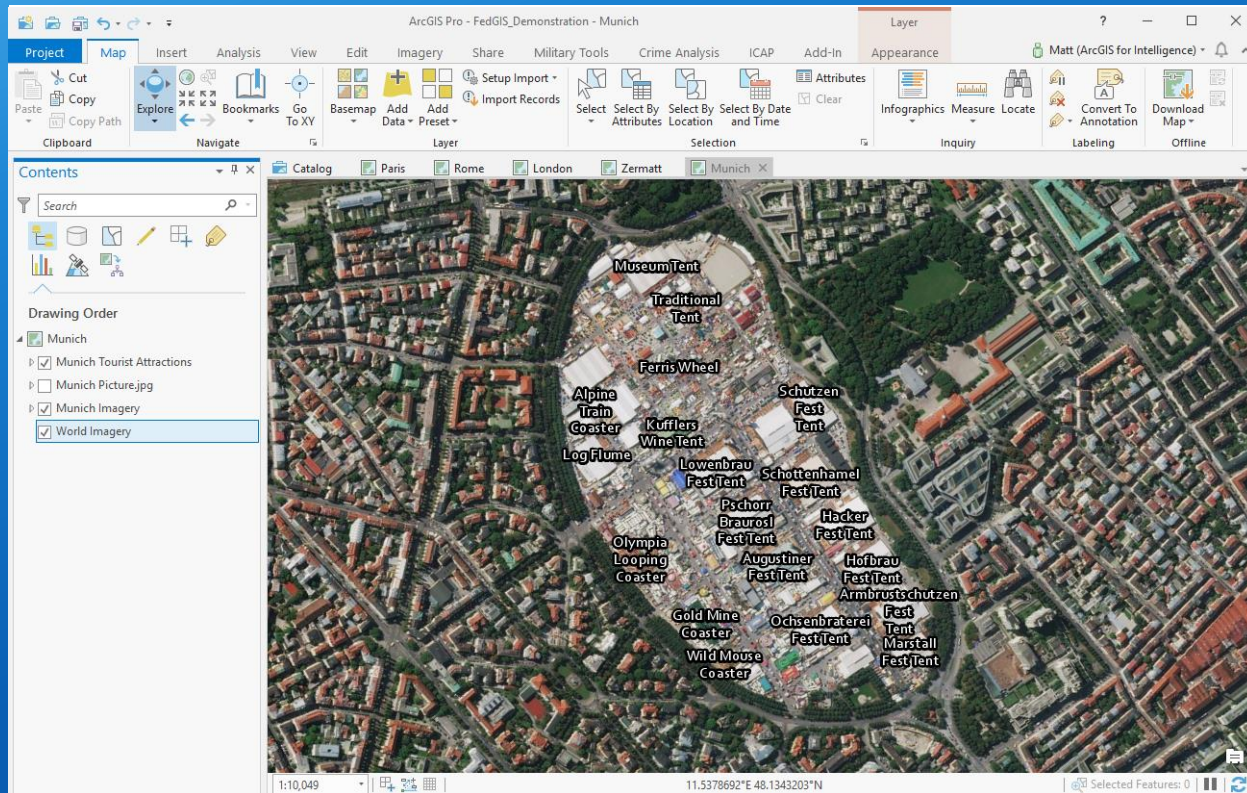

Imagery Tab:

- Tip # 59: Use **Auto-georeference** to align a non-geolocated image
- Tip # 60: Use **Pixel Editor** to make changes to a raster's display
- Tip # 61: Use the **Motion Imagery** Tools to analyze Full Motion Videos (FMV) or Drone footage

Share Tab:

- Tip # 62: Share maps as a **Mobile Map Package** to use it in a Mobile Application
- Tip # 63: When sharing a **Web Map** set the appropriate configuration (Exploratory, Editable, Visualization)
- Tip # 64: Create and share **Project Templates** to use when creating common product types

Working with Imagery and Sharing Your Work

One Last Tip...

- **Tip # 65:** Esri provides numerous online help resources:
