Getting Started with Search

Learn how to build and run searches, review logs, and more. Being as a **Log Analyst**, we need to search for the **specific logs** and **perform aggregation on log data for trend analysis**

Search Basics

Sumo Logic search syntax uses logical and familiar operators allowing you to create ad hoc queries quickly and efficiently.

Build Searches

Details on building a search - best practices, syntax, time range, and efficient searches.

Using the Search Page

Understand the basic components of the Search window and how they can help you investigate your issues.

Suggested Searches

Sumo Logic queries can help track and diagnose common IT issues. Take a look at these Sumo Logic suggested searches.

 Note

you need to cover all the section with sequentially wise
